

Creating and delivering print-ready data

It is necessary to deliver electronic data in **PDF** printing format (**version 1.3**), **300 DPI**, **CMYK** colour model, and fonts in curves for creating final quality product.

This PDF should ideally contain: a **preview sheet (1)**, where graphics are including knife lines, a **printing sheet (2)**, where graphics are exclusive of knife lines, and a **sheet where only knife lines are displayed (3)**. **If a printing sheet contains knife lines, these lines have to be separated by a line in full colour with spot colour overprinting.** It is appropriate that length of sides and a position of graphics of the document will match (see pic).

Graphics shall have **3-5 mm bleed** from where the cut is to be made. Printing and other crop marks shall not extend into the bleed area.

If you are not sure about preparing print-ready data, do not hesitate to contact us on phone + **420 731 458 765** or email **ptf@obalprint.cz**.
